

HOLMAN ENGINEERING

Athletics Event Management System

Due to the success of the Diving, Synchronised Swimming and Water Polo event management systems, Holman Engineering was awarded an order to develop a custom event management system for the Sydney International Athletics Centre.

The Athletics 2000 system (This is the name given to the event management software) receives the results electronically from the Photofinish equipment, drives the scoreboard, produces detailed reports at the completion of games, and provides all results to the media. The photo below was taken when the system was running the 1995 Optus National Athletics Championships.
