

HOLMAN ENGINEERING

Diving Event Management System

The Olympic Construction Authority had a need to install the world's most technologically advanced event management system in the recently built Sydney International Aquatics Centre. This need went to international public tender. Holman Engineering proposed the development of a custom system to meet the specific needs of the 1994 FINA rules, the Sydney International Aquatic Centre and the Local Diving Association

Against the worldwide competition for this tender, Holman Engineering secured the order to develop this system. The event management system is a PC based system that runs in the Windows Environment. The system communicates with custom hardware (Referee's consoles, Judges consoles and local display boards), the Main Scoreboard and the media (via the network which Holman Engineering also designed and installed).

HOLMAN ENGINEERING

Synchronised Swimming Event Management System

The Olympic Construction Authority had a need to install the world's most technologically advanced synchronised swimming event management system in the recently built Sydney International Aquatics Centre. This need went to international public tender. Holman Engineering proposed the development of a custom system to meet the specific needs of the 1994 FINA rules, the Sydney International Aquatic Centre and the Local Synchronised Swimming Association

Against the worldwide competition for this tender, Holman Engineering secured the order to develop this system. The event management system is a PC based system that runs in the Windows Environment. The system communicates with custom hardware (Referee's consoles, Judges consoles and local display boards), the Main Scoreboard and the media (via the network which Holman Engineering also designed and installed).

HOLMAN ENGINEERING

Water Polo Event Management System

Due to the success of the Diving and Synchronised Swimming Event Management Systems, Holman Engineering was awarded an order to develop a custom event management system for Water Polo.

The Water Polo 2000 system (This is the name given to the event management software) drives the scoreboards, produces detailed reports at the completion of games, and does all the administration involved with running a Water Polo tournament.
