

HOLMAN ENGINEERING

EZI Pos Controller

Holman Engineering have developed an EziPos terminal which is used by telecommunications companies to activate phone cards.

The EziPos terminal allows a phone card to be swiped through the device. The EziPos terminal then dials up the service provider and activates the card and invoices the retail outlet (using DTFM codes).

The EziPos terminal is Austel approved (Holman Engineering is an approved Austel Designer and Supplier).
